Participation in the International Welding Show 2024

Denyo Co., Ltd.
Head Office: 2-8-5, Nihonbashi-horidomecho,
Chuo-ku, Tokyo

Denyo Co., Ltd. exhibited at the Japan International Welding Show 2024, held in Osaka, Japan from April 24th (JST) to April 27th (JST).

Under the theme "Support for a Carbon-Free Society," Denyo showcased the DLW-400E5EW5 equipped with a Stage-V engine that meets world-class strict emission regulations, and the DLW-500ISW, which features an automatic idle stop function that reduces CO2 emissions and environmental impact. This model can perform three welding methods—manual welding, TIG, and semi-automatic welding.

A total of 1,296 people visited the Denyo booth over the four days. While most visitors were from Japan, we also welcomed guests from 14 countries, including South Korea, Thailand, the Philippines, Germany, Finland, the United States, and Brazil. Visitors were not only impressed by the high environmental performance but also by the multifunctionality of our welding units, which can be combined for various welding methods.

The backpack-style battery welder "WELZACK," introduced for the first time at this exhibition, particularly attracted significant attention. Many participants experienced wearing the WELZACK and appreciated its highly compact and lightweight design.

We had the opportunity to exchange opinions with various customers, deepening their understanding of Denyo welders and discussing practical applications at worksites. The exhibition concluded with great success.

We, at Denyo, are always with you, helping you perform your finest work.
