

## Cumulative production volume of engine-driven welders have exceeded 800 thousand units

Denyo Co., Ltd.

Head Office: 2-8-5, Nihonbashi-horidomecho,

Chuo-ku, Tokyo

President Shoichi Shiratori

In January 2022, Denyo Co., Ltd. exceeded a cumulative production volume of 800 thousand units of its engine-driven welders. (According to our survey)

This was achieved over the 63 years since Denyo began production of Japan's first high-speed engine-driven welder, the ACD-180, in March 1959.

This is a result of the patronage of customers around the world supporting Denyo's engine-driven welders. We would like to express our thanks to all the customers who have chosen our products.

As the top manufacturer of engine-driven welders, we will continue to work to develop and produce products that ensure customer satisfaction.
